

## VIVAX VELOCE CF LIGHT - SPORTIVE - STYLISH

### **Invisible Performance 2014 - from racing bike into an e-racer!**

With the *vivax assist* "Invisible Performance Package" you can invisibly transform your racing bike into an e-racer. The battery, previously tucked away in the saddlebag, is available as a bottle battery from 2014, and maintains the overall look of an unpowered racing bike. The start button, once cable connected, is now wireless. Integrated into the handlebars it is virtually invisible and can be positioned anywhere you like on the bars; in the bar ends or along their length.

### **High-tech**

The carbon frame was manufactured in collaboration with an experienced frame builder, and is the ideal combination with the *vivax assist* 4.0 electric motor.

### **An Authentic Feeling Ride with or without Motor Power**

With the lightest electric motor available anywhere the bike looks just like a conventional racing bike, and so provides that authentic feeling ride. With the motor assisting your leg power the going is both quick and easy. With the motor switched off all *vivax* bikes work with virtually no resistance, thanks to the motor's freewheel, maintaining an authentic feeling ride.

The low total kit weight of 1.8 kg (including battery), means the bike can still be used as a "normal" bike. No other motor system complements sports biking so perfectly as the *vivax assist* 4.0.

### **Camouflaged Power with Ease of Control**

A simple push of the button and the invisible drive springs to life. Elegantly hidden in the seat tube it works directly on the bottom bracket axle, adding an additional 200 watts of motor power, instantly making pedalling easier. Switch the invisible and ultra-light drive on and off easily whilst riding.

Intelligent control of the motor speed means it can be set at up to 90 rpm, providing for smooth motor engagement. The improved efficiency of the maintenance-free motor-drive gear unit and the reduction of temperature in the frame mean extra longevity too.

### **That Extra Push**

Electronic adrenaline unleashes your true capabilities you once thought impossible..... Longer rides with stiffer climbs are now possible. A quick push of the handlebar-mounted button and your wheels will glide up routes you previously struggled on and you can avoid running out of gas on those *really* demanding mountain assaults.

The leisure biker can rediscover the joy of going up hills or against the wind whilst cyclists wanting a serious workout will be able to optimize their training programme for maximum health benefits. Both can use the *vivax assist* 4.0 to suit their own needs; the end result is increased enjoyment for travel and exercise.

### **Good Health**

Monika Schweitzer, CEO of the company Gruber Antrieb GmbH & Co. KG says, "Healthy exercise and training is not about taking your body to the absolute limits. Rather more it is about using your own judgment to discover just when "less is more", finding your ideal pulse rate and optimizing your training. You should be smiling all the time you're on your bike."

### **Innovative and unique**

New technologies make use of high-quality materials and systems meaning a unique combination of aesthetics, weight and function.

**Technical description: SEAT TUBE MOTOR VIVAX ASSIST 4.0**

<b>Model</b>	vivax assist 4.0
<b>Type</b>	Seat tube mounted motor
<b>Power</b>	200 W
