My Book of

SUBTRACTION

If your child can subtract the numbers 1 through 5 from whole numbers, then this book will build on that foundation.

Use this book to help your child learn to subtract the numbers 1 through 20 from whole numbers.

SUBTRACTION

The aims and purpose of this book

- ▲ If your child can subtract the numbers 1 through 5 from larger whole numbers, this book will expose him or her to the broader world of numbers by providing opportunities to practice subtracting larger numbers. In this book, children will learn first how to subtract the numbers 1 through 9, and then they will reinforce this skill by learning how to subtract from numbers up to 20.
- ▲ As in the case of subtraction using the numbers 1 through 5, children can master subtraction using larger numbers only after they acquire the ability to recite numbers both forwards and backwards. Building basic subtraction skills is vital to understanding the decimal system, which is the foundation of higher-level arithmetic concepts and skills taught at school such as multiplication, division, and fractions. The purpose of this book is to prepare children for higher-level mathematics by improving their basic subtraction skills.
- ▲ It is important for children to truly understand how to combine and break down numbers in order to help them master addition and subtraction. Children are willing to learn what is easily understood by them, and once they learn something new, they always want to know more. Kumon Workbooks' incremental method will encourage children to gain solid academic skills while showing them the pleasure of learning.

How to hold a pencil properly

There are several ways to teach children to hold a pencil properly. Here is one example.

1

Let your child form the shape pictured here, using his or her own fingers. Put the pencil between the bending middle finger and joint part of thumb and forefinger.

2

Have your child grip the pencil with thumb and forefinger.

3

Check the way that your child is holding the pencil against the picture to decide whether or not it is the proper way.

It can be difficult for a child who does not yet have enough strength in his or her hand and fingers to hold the pencil properly. Please teach this skill gradually, so that your child will remain interested and willing to hold a pencil naturally.

How to use this book

- ▲ This workbook has no answer section. Please check your child's answers when he or she is done with each page. Some pages contain a number chart to give children a hint that the answers are included in the chart.
- ▲ Offer praise at the end of each page, and write encouraging words or place stickers on completed pages as a special prize.
- ▲ Please refer to the "To parents" notes in this book, which provide more comments and advice on how to help your child progress through this book.
- ▲ It is a good idea to set the number of pages your child will complete in a day. It may be one sheet (two pages) or two sheets (four pages) a day. The essential point to remember is that the practice should come to an end when your child still wants to do a little more.
- ▲ Most workbooks contain the same paper stock, but each Kumon Workbook features a different type of paper, tailored to a specific activity and use. This book features a good quality paper geared to children who are learning to write. The paper can stand up to rough drawing, even from children who are still refining their pencil-control skills. It is also made for easy erasing, which gives your child the opportunity to draw the lines again and again on each page.

Learning to subtract the numbers 1 through 5 will build a foundation for more complicated subtraction skills. Please encourage your child to practice until he or she can complete the exercise easily without counting fingers or getting confused. When your child is unsure of his or her answer, encourage him or her to check the answer by adding the result to the number subtracted.

To parents

Starting with this page, your child will review subtraction formulas taught in this workbook. If your child is confused or seems to be having trouble, please encourage him or her to return to the section that deals with the number he or she finds difficult. Once your child can easily solve formulas including large numbers, he or she has mastered basic subtraction. Please offer lots of praise.
