kuoma for adults

All boots and ankle boots for adults have reflective strips and a changeable insole, which in most of the models is felt insole. Many models have water and dirt repellent PU coated split leather reinforcements, some models have suede reinforcements. All models made of textile have warm pile lining. The shoes (except for nubuck leather boots) can be washed and dried in max +40°C.

kuoma® shoes are light and extremely warm Finnish boots for winter use.

The sturdy, durable, flexible, thermally insulating PU outsole is moulded directly on to the upper to bond better than a glued outsole. Although the sole may be slippery when new or in difficult conditions, grip improves after brief wear.

Elastic heel counter is bonded straight on to the outsole for heel support.

All models feature durable leather reinforcements impregnated against damp.

There are 3M-Scotchlite® reflective strips in front and back for extra safety.

Under surface material there is a layer of thermal insulation foam with closed cell structure to prevent water absorption (product dries quickly).

Double stitching is used to provide extra strength in seams subject to tough wear and tear.

The surface material is hardwearing and has good moisture and dirt repellent properties thanks to Nuva®-treatment.

Inside the boot there is a clear size label with space for name (children's models).

The inner lining is made of quality pile which is warm and durable.

Models made of textile are machine and hand washable. Washing and drying temperature 40°C max.

The warm, removable insole has rough under surface to prevent "rolling" under the foot.
